

Account Lead Capture Form — Solution Architecture

Feature 002 LWC API 63.0 · Salesforce source 66.0 2026-04-24

1 · COMPONENT ARCHITECTURE

2 · DATA FLOW

Validation is intentionally duplicated: client-side for immediate UX feedback, server-side for data integrity regardless of caller.

3 · SECURITY MODEL

All access is granted via the **Lead_Capture_Access** permission set. The Apex controller runs with sharing, enforcing record-level sharing rules.

Permission Set grants

Layer	Grant
Apex class	LeadCaptureController — execute
Lead object	Create, Read
Lead object	NO Edit, Delete, View All
FLS Source_Account__c	Read + Write
FLS Capture_Notes__c	Read + Write

Field-level security overview

Field	Read	Write
Standard Lead fields (Name, Email, Phone...)	YES	YES
Source_Account__c	YES	YES
Capture_Notes__c	YES	YES
All other Lead fields	PROFILE	NO

4 · DATA MODEL & FIELD MAPPING

Form field	Lead field	Type	Required	Notes
First Name	FirstName	Text	OPTIONAL	
Last Name	LastName	Text	YES	
Email	Email	Email	YES	Regex validated both layers
Phone	Phone	Phone	OPTIONAL	
Company (<i>auto-filled</i>)	Company	Text	YES	Populated from Account.Name via wire
Lead Source	LeadSource	Picklist	YES	Web · Phone Inquiry · Partner Referral · Other
Notes	Capture_Notes__c	Long Text (500)	OPTIONAL	Custom field · char counter in UI
<i>recordId</i> (context)	Source_Account__c	Lookup → Account	YES	Custom field · injected by record page · SetNull on Account delete
